

We operate nationwide as a service provider in the fields of geoinformation technology, database management, and application programming.

Our project portfolio ranges from geomarketing, whitespace analysis, and route planning to innovative comprehensive solutions for the organization of your geodata structures within your company. We carry out GIS projects for you, including project management - from project development, through project implementation, to project completion and evaluation of the results.

As consultants, we also provide expert advice during the various phases of your GIS project. Furthermore, we offer corporate training sessions on GIS topics that you and your employees encounter in your daily work. We are happy to develop customized training programs tailored to the specific needs of your company.

The Team

GIS Akademie

Lars Schimmer
Management

Our many years of project experience make us a competent partner for companies, planning offices, and clients from the public administration sector. For us, it is a given to anticipate and evaluate the latest GIS trends already in the development stage, with the goal of developing the right company-specific solutions for you and optimizing your work processes.

We are committed to these high quality standards for the benefit of our customers!

The GIS Academy is a member of "Netzwerk für den deutschen Mittelstand."

Software

EEG Pro

Wind and Solar Park Planning
Made Easy!

EEG Pro is your industry solution for planning wind and solar sites, reliably supporting you from data import to lease calculation.

EEG Pro provides you with tools for all central project steps:

- Data import (CAD, Open StreetMap, terrain models, etc.)
- Data preparation (Automatic compilation of all data for each planning step)
- Potential site search (Dynamic search for potential park areas with your criteria - including rating of the result areas)
- Placement of wind turbines with automatically calculated safety buffers
- Micro analysis for potential park areas (solar radiation, field of view calculations, shadow assessment, optimal cable routes, etc.)
- Lease calculation

What makes EEG Pro the industry leader?

- Easy to use with optimal orientation for efficient productive operation
- Extremely fast calculations with large data sets (potentially whole federal states in high detail)
- High stability and accuracy
- Very high flexibility (all processes can be individually tailored to your needs)
- All products can be easily exported into highly professional maps using the market-leading platform ArcGIS Pro
- Competent and fast support for questions and problems
- Use of the latest GIS technology and regular updates
- Extensive consideration of your wishes (your needs drive our software development)

EEG Pro is the turnkey solution for your projects!
